

# WELCOME!

Thank you for attending the I-270 North Environmental Assessment (EA) Public Hearing! Tonight you will be able to review the EA and the Preferred Alternative for upgrading I-270 from the I-70 interchange on the west to the Chain of Rocks Bridge on the east and to provide feedback.

This public hearing is the last public event for the I-270 North study. It fulfills the National Environmental Policy Act's requirements for projects such as this one that requires an environmental analysis. It also provides the Missouri Department of Transportation (MoDOT) the opportunity to obtain feedback from the local community.

## **During the public hearing, you will be able to:**

- Review meeting materials and discuss the project with other attendees.
- Interact with project staff to understand fully the benefits and impacts of proposed improvements to I-270.
- Provide MoDOT your feedback and suggestions related to this study.

## **You can provide feedback by:**

- Completing a comment form in writing or online on one of our iPads;
- Giving comments to a court reporter; or
- Speaking publicly at an open microphone for no more than two minutes.

***If you want to speak publicly, please sign-up at the registration table.***

We have divided the public hearing into four stations. They are:

### **Station #1: Project History**

Here you will find a summary of the work to date on this study.

### **Station #2: Preferred Alternative**

This station describes the Preferred Alternative proposed for I-270 through a variety of maps, data and a simulated video.

### **Station #3: Impacts**

Here you will learn the impacts of the Preferred Alternative.

### **Station #4: Feedback**

Give us your thoughts and opinions about the Preferred Alternative either in writing, online or orally.

***Thank You for Your Interest and Involvement in the I-270 North EA!***
